

Goodland Apple Malus 'Goodland'

Height: 20 feet Spread: 20 feet Sunlight: O

Hardiness Zone: 3a

Description:

A very hardy green apple with a reddish blush, high quality, great for cooking and eating fresh; eating apples are high maintenance and need a second pollinator; the perfect combination of accent and fruit tree, needs well-drained soil and full sun

Edible Qualities

Goodland Apple is a small tree that is commonly grown for its edible qualities. It produces large light green round apples (which are botanically known as 'pomes') with a red blush and white flesh which are usually ready for picking from late summer to early fall. The apples have a sweet taste and a juicy texture.

The apples are most often used in the following ways:

- Fresh Eating
- Cooking
- Sauces

Features & Attributes

Goodland Apple features showy clusters of lightly-scented white flowers with shell pink overtones along the branches in mid spring, which emerge from distinctive pink flower buds. It has forest green deciduous foliage. The pointy leaves turn yellow in fall. The fruits are showy light green apples with a red blush, which are carried in abundance from late summer to early fall. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This is a high maintenance plant that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Disease

Aside from its primary use as an edible, Goodland Apple is sutiable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
