

Cuthbert Grant Rose

Rosa 'Cuthbert Grant'

Height: 3 feet

Spread: 4 feet

Sunlight: 

Hardiness Zone: 3a

Group/Class: Parkland Rose

Description:

A Parkland series rose, featuring showy double true red flowers in early summer, repeat-blooming; compact mounded habit, adaptable and resistant to disease, a good all-round garden shrub; all roses need full sun and well-drained soil

Ornamental Features

Cuthbert Grant Rose is blanketed in stunning fragrant dark red flowers at the ends of the branches from late spring to late summer. The flowers are excellent for cutting. It has dark green deciduous foliage. The oval compound leaves turn yellow in fall.

Landscape Attributes

Cuthbert Grant Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance shrub that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease
- Spiny

Cuthbert Grant Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Cuthbert Grant Rose will grow to be about 3 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.
